
Attention Windows[®] 2000 Users

Important: Before installing the Windows 2000 drivers, you must install your modem hardware according to the instructions in your Installation Guide. Then follow the steps below.

- 1** Reboot your computer. A dialog box named **Found New Hardware Wizard** will display. Click **Next**.
- 2** Windows will prompt, **What do you want the wizard to do?** Select **Search for a suitable driver for my device (recommended)** and click **Next**.
- 3** Windows will then ask you to specify a search location. Insert the floppy disk that came with your modem and select **Floppy disk drives**. Make sure no other options are selected. Click **Next**.
- 4** You will see a dialog box that says **Digital Signature Not Found**. The reason is that Windows 2000 is a new operating system and its drivers are new. You should ignore this message and click **Yes**. The installation will proceed correctly. When Windows locates the driver, click the **Next** button.
- 5** Click **Finish**. Your installation is complete.
