
Important Information

For Hayes Optima Customers

If you want to use your internal Optima modem in a non-Plug-and-Play configuration, you'll need to read these instructions to ensure that your jumpers are set correctly.

First remove the red shunt from the JP2 pin and place it on the JP1 pin for both the COM port and the IRQ settings. **Note:** JP1 and JP2 are clearly labeled on your modem board.

Then match the example below to verify the jumper positions for both the COM port and the IRQ settings. If you have any questions, contact Hayes Technical Support at (617) 753-0794 or visit www.hayesmicro.com.
